# XYLEM WATER SOLUTIONS - GLOBAL LEADERS IN THE WATER INDUSTRY

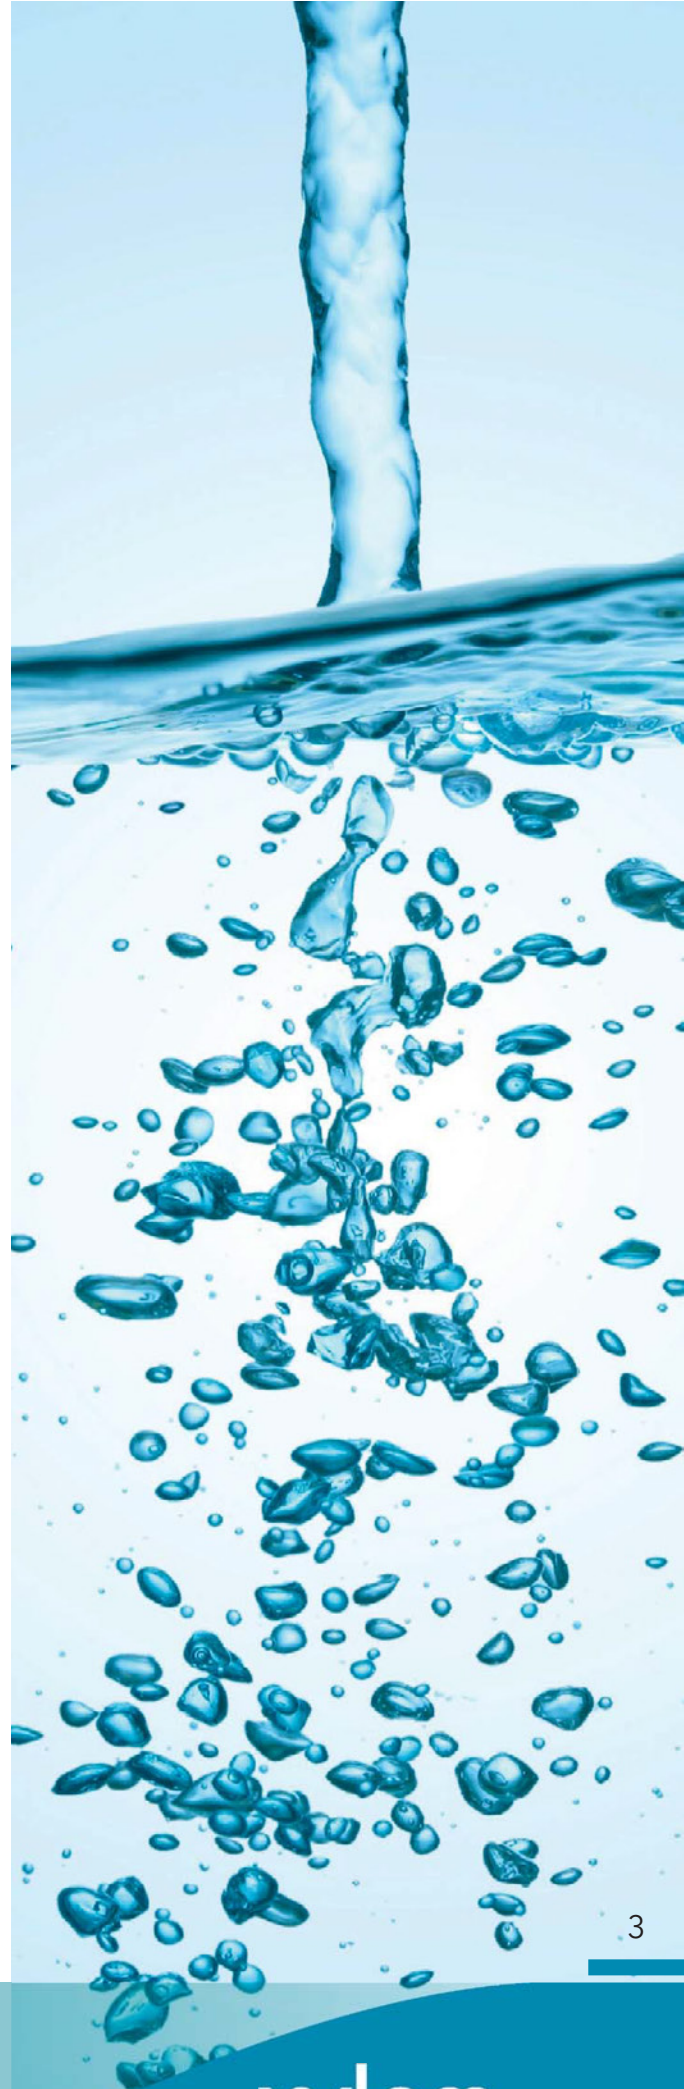

Xylem is a leading global water technology provider, enabling customers in more than 150 countries to transport, treat, test and efficiently use water in public utility, construction, mining, tunnelling, residential and commercial building services, industrial and agricultural settings.

## Xylem Water Solutions UK

The origins of the Xylem business go back more than 100 years and include some of the best known brands in the water industry including Flygt, Godwin, Lowara, Leopold, PIMS, Sanitaire and Wedeco, as well as the company's TotalCare services.

Today Xylem Water Solutions is focused on providing the best products, maintenance and rental services, application expertise and aftersales support for customers requiring transport and treatment of water and wastewater.

The range of products includes submersible pumps, dewatering pumps, booster sets, circulator pumps, monitoring and control, ozone and UV treatment, and packaged pump stations, in addition to aeration and filtration systems. All of these products primarily serve public utilities, municipal and industrial markets and specific sectors, such as marine and food and beverage.

# Flygt

Flygt has been a leader in its field since the early 1900's and is internationally recognised as offering high quality, efficient and versatile products in recent years. Flygt has revolutionised the pumping industry with the introduction of N pump technology, which consisted of a non-clogging impeller which offers improved performance and reduced energy consumption.

In addition to submersible wastewater pump products, the current Flygt range comprises of dewatering pumps, packaged pump stations, mixers and mechanical aeration equipment, raw water supply, abrasive or contaminated industrial processes, mining and construction, as well as irrigation.

Flygt also offers complete monitoring and control solutions for remote monitoring of assets and optimisation of their performance.

# Godwin

With more than 30 years' experience in the pump industry, Godwin is synonymous with the manufacture of innovative dewatering portable pumps.

The brand offers a range of versatile pumping solutions that are economical, reliable, and can provide emergency assistance when required.

# Lowara

Lowara has been a leading manufacturer of hydraulic pumps for more than 40 years, supporting customers throughout Europe.

The brand is a world leader in stainless steel pump manufacturing technology, offering residential solutions for water, wastewater, HVAC and fire protection in agricultural, commercial and light industrial applications.

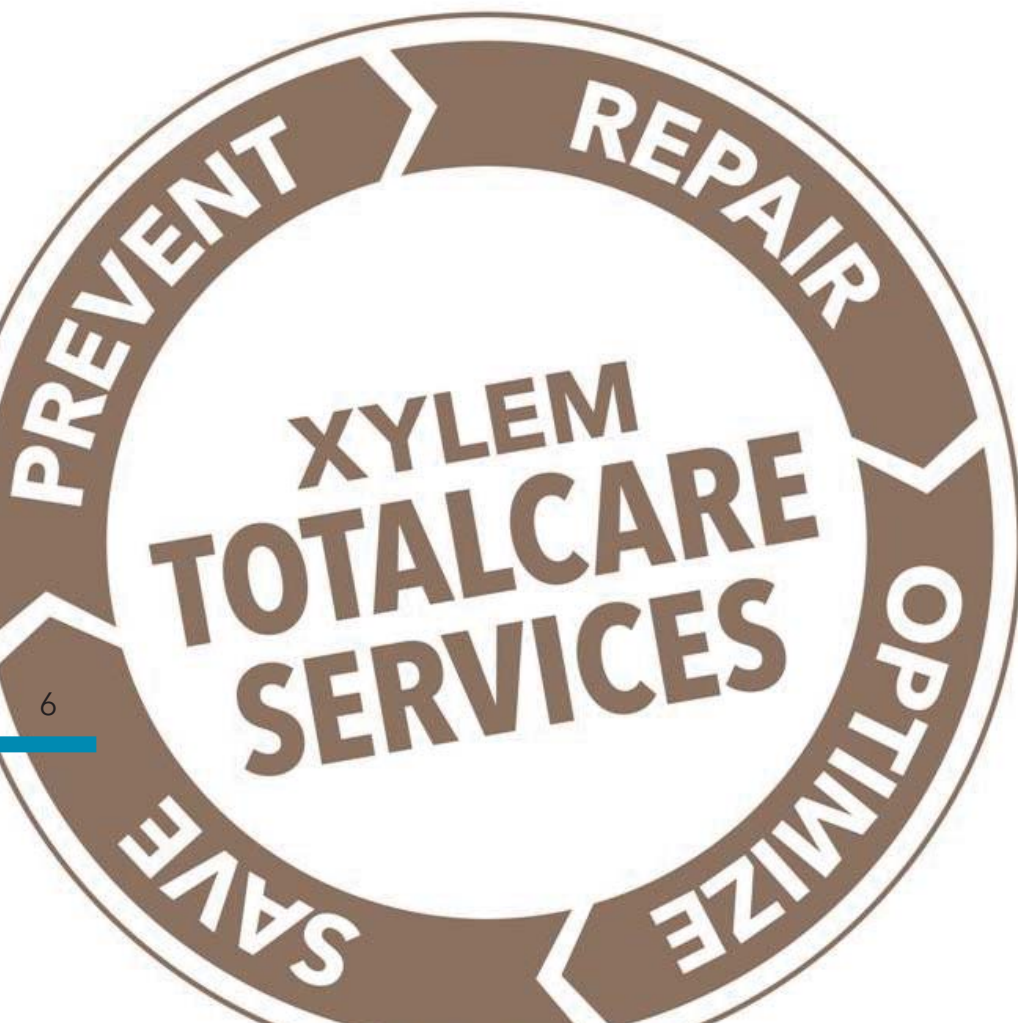

# TotalCare

Xylem TotalCare is a comprehensive, integrated portfolio of services that ensure pumps remain efficient and productive in operation. Xylem's portfolio is supported by deep systems knowledge and expertise in water and wastewater applications, giving customers the operational security and time to focus on core business activities.

By working to the mantra 'prevent, repair, optimise and save', customers can access a team of knowledgeable, professional and highly skilled staff who pride themselves on providing the right solutions every time.

To enhance the services already offered, Xylem announced the acquisition of the PIMS Group, national supplier of water and wastewater services, in 2013. PIMS Group provides wastewater support services to a wide range of clients from facilities and property managers, retailers, developers, commercial organisations and water authorities to homeowners.

# TotalCare services

For secure, optimal operations

Xylem TotalCare is a comprehensive, integrated portfolio of services that ensures your business keeps running at its best. Our portfolio comes backed by deep systems knowledge and expertise in water and wastewater applications. Which gives you the operational security and more time to focus on your core business.

# One Xylem

Recognising that the marketplace was increasingly asking for a single, comprehensive solution delivered by a single trusted supplier, Xylem Water Solutions, Lowara and Flow Control merged to become one single entity in the UK.

The new single company approach means that customers will have one point of contact. Whereas before customers may have had to liaise with a brand representative for each Xylem product used on a project, from now on all contact will be centralised to make communication much easier. This enables Xylem to cover all aspects of the water spectrum and allows the offering of complete fluid handling solutions for the UK and Ireland.

This new approach allows Xylem to offer customers comprehensive technical advice which draws on the experience and expertise of technical specialists. The in-depth knowledge collectively possessed stretches far across the building services and manufacturing processes, meaning Xylem can consult on an installation within the wider project team.

Duncan Lewis, Managing Director at Xylem Water Solutions UK, said: "Merging our UK divisions will allow us to combine our trusted products, services and wealth of experience with these market leading brands to offer complete water solutions to the municipal, industrial and building services sectors. All the time, supported by expert technical support which can be called upon at a moment's notice.

"We understand the importance of moving forward as one company with one voice and, from our new position, we will be able to leverage our shared history of innovation to offer a more dedicated service to both new and existing customers.

"As this positive change takes hold, we remain dedicated to optimising water quality and access on a global scale."
